### **Detailed Action**

Receipt is acknowledged of the Response filed 5/23/2007.

The original claims 1-12, 14-16, 18-19, 21 are pending in this application.

Claims 13, 17, 20 have been cancelled.

### **Claim Objections**

Claims 1, 3-5 and 18 are objected to because of the following informalities: The word "heterocycloalky" is misspelled. The appropriate spelling is "heterocycloalkyl". Appropriate correction is required.

### **Claim Rejections – 35 USC 103**

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12, 14-16, 18-19, 21 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Fitzpatrick et al. (J. Am. Chem. Soc., 1991, 113, 3166-3171), in view

Art Unit: 1621

of Kim et al. (Current Opinion in Biotechnology, 2002, 13, 578-587). See previous office action.

Applicant's arguments filed 5/23/2007 have been fully considered but they are not persuasive.

The Examiner acknowledges Applicant's argument that Kim et al. does not disclose or suggest that racemization metal catalysts are compatible with the protein hydrolysis enzymes recited in the instant application. Also acknowledged is Applicant's argument that neither document discloses or suggests that such a system can be utilized to produce a (S)-chiral alcohol in high yield and optical purity.

One of ordinary skill in the art desiring to produce the (S)-chiral alcohol, would be motivated to utilize the teachings of Kim et al., to obtain the (S)-chiral alcohol of Fitzpatrick et al., in high yield and optical purity. Additionally, one of ordinary skill in the art would be motivated to make the (S)-chiral alcohol, known to be useful for fine chemistry in the pharmaceutical, pesticide, cosmetic and food industries.

In response to Applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

Therefore, it would be prima facie obvious to one of ordinary skill in the art at the time of the invention, to use the ruthenium racemization metal catalyst of Kim et al. and to reduce the ketone, with a hydrogen donor, to get the corresponding alcohol as the

starting material, as shown in Kim et al., for the transesterification reaction of Fitzpatrick et al. The expected result would be the efficient formation of an (S)-chiral alcohol from the racemic alcohol or corresponding ketone, in high yield and optical purity.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
